

Connectivity Software from Jungo to be Demonstrated at CeBIT 2011

- **Comprehensive suite of embedded USB, WiFi and Bluetooth software, driver development tools to be demonstrated**
- **Featuring full support for the new USB 3.0 protocol**

SAN JOSE, CA, February 24, 2011 – [Jungo Ltd.](#), a leading provider of connectivity stacks and driver development tools, will be demonstrating its comprehensive range of embedded connectivity software, driver platforms and industry-specific solutions at the CeBIT 2011 conference and exhibition, in Hanover, Germany. The Jungo booth will demonstrate the company's full support for the new USB 3.0 protocol.

Jungo's connectivity software can be found in over 700 million devices worldwide and in industries as diverse as mobile phones, broadband modems, point-of-sale, medical equipment, defense industries, the automotive industry and digital TV. Jungo's driver development tools and embedded stacks for major connectivity protocols enable manufacturers to focus on their core business and to bring their products to market swiftly and cost-effectively.

On their stand at CeBIT, Jungo will showcase embedded stacks for USB (USBware) and Bluetooth (BTware), PC USB class drivers (DriverCore) and the PC driver development toolkit (WinDriver).

Industry-specific solutions to be displayed include middleware for in-car infotainment systems, a comprehensive software suite for connecting automotive infotainment to smartphones, media players and other devices, and specialized solutions for the Broadband Mobile and Digital TV markets.

“Jungo’s deep understanding of connectivity software and our track record of delivering timely solutions make us the choice of industry-leading chip manufacturers, device manufacturers and OEMs in North America, Europe and the Asia-Pacific region,” said Ophir Herbst General Manager of Jungo Connectivity. “Our market leadership is demonstrated once again by our full support for the new USB 3.0 protocol.”

The Jungo booth will be in the USB-IF zone, in Hall 17, Stand D76, at CeBIT.

About Jungo

Jungo Ltd., an NDS Group company, is a provider of broadband home value-added service solutions. Jungo's flagship products, OpenRG™ (residential gateway software platform) and OpenSMB™ (small and medium business gateway software platform) enable broadband operators to deliver managed revenue-generating services to the digital home.

Jungo also offers a variety of connectivity software solutions for USB and PCI. These include WinDriver™, a driver development toolkit that enables developers to create custom device drivers that can run on a multitude of operating systems without modification.

DriverCore™ offers standard USB drivers, allowing device manufacturers to expose a variety of native communication interfaces via USB to different operating systems and platforms. USBware™ is a complete, high quality and small footprint embedded USB software protocol stack, allowing device manufacturers to incorporate standard USB connectivity easily in their designs.

MediaCore™ enables automotive infotainment systems manufacturers to integrate a complete hardware and media access, control and streaming infrastructure into their products.
