Taipei, Taiwan – May 14, 2009 – Allion Test Labs announced its participation as an exhibitor in the showcase during the SuperSpeed USB Developers Conference event.

Accredited as a USB-IF ITL (Independent Test Lab) since 1999, Allion has conducted over 100,000 USB test projects for products shipped from different regions worldwide. During each product developing stage, Allion is able to provide not only full types of USB compliance tests but also quality validation and debugging support. Moreover, in order to help USB manufacturers to easily and effectively validate product's performance in the early stage, we also developed a series of test fixtures according to the test criteria defined in the USB-IF Compliance Program.

A one-stop test solution is available with Allion Test Lab's extensive service capabilities in supporting the development of USB standards. "To accommodating with the increasing demand from world-wide USB manufacturers, Allion has established test facilities in China, Japan, Korea, Taiwan and USA. We can provide our customers localized support which accelerates the service lead time and help address a growing local demand for professional USB test services." said Danny Yeh, VP of Allion Test Labs.

Visitors who stop by the Allion's booth during the exhibition sessions will receive 50% off discount coupon on all the USB related test service. This special promotion is valid until the end of 2009.

About Allion

Allion Test Labs, Inc. is a leading IT and CE testing organization that conducts extensive testing services in multiple regions of Asia with products submitted from around the world. Headquartered in Taiwan, Allion connects to worldwide IT developers by providing outstanding testing solutions and services for many different product lines including: desktop & notebook computers, multimedia devices, networking and wireless devices, mobile devices, digital home appliances, peripherals, software applications and more.

Aiming at each stage throughout the new product development cycle, Allion is able to generate customizable test plans with exceptional technical expertise for a high level of efficiency. With a staff of over 300 highly experienced test professionals and offices in 5 countries, Allion is an authorized "certification" test facility for over 20 of the world's top standards organizations, such as DLNA, PCMCIA, SATA-IO, USB-IF, Wi-Fi Alliance and many other influential groups.
