**LeCroy is First to Offer USB Protocol Analyzer  
With Support for Microsoft's Windows Vista**

**Santa Clara, CA, August 9, 2007:** LeCroy Corporation, a leading supplier of oscilloscopes and serial data test solutions, today released software enhancements that add native support for Windows Vista to its industry leading USB analyzer family. Interest in connecting protocol test equipment directly to Windows Vista-based PCs is growing due to the popularity of laptops in engineering environments. The LeCroy USB software release v2.5 is available for download now and also includes new device class decodes for specialized upper-level protocols including IP, IrDA, ATAPI, and HTTP.

"Now with support for Windows Vista, LeCroy's customers can easily connect their USB analyzers to some of the most powerful PCs available," said Zach Little, Program Manager in the Windows Device Platform Group at Microsoft, Corp. "This will help them take advantage of the flexibility and enhanced security that Windows Vista has to offer."

"Supporting Windows Vista with our USB protocol analyzers makes the test set up much more portable allowing greater convenience and productivity for users", stated Mike Micheletti, LeCroy's Product Manager for USB test and verification tools. "Along with new device level decodes, these enhancements ensure LeCroy's USB protocol verification product family will continue to be the industry standard for USB test and debug."

Universal Serial Bus (USB) has emerged as the one of the main interfaces for attaching test and measurement equipment to the Microsoft Windows-based PCs and is the primary control interface for many of the LeCroy analysis instruments. This update is available for the LeCroy USBTracer/Trainer, USB Advisor, and USB Mobile High-Speed. For additional information, contact LeCroy at 1-800-4LeCroy (1-800-453-2769) or download version 2.5 at [www.lecroy.com](http://www.lecroy.com).

**About LeCroy**

LeCroy Corporation is a worldwide leader in serial data test solutions, creating advanced instruments that drive product innovation by quickly measuring, analyzing, and verifying complex electronic signals. The

Company offers high-performance oscilloscopes, serial data analyzers, and global communications protocol test solutions used by design engineers in the computer and semiconductor, data storage device, automotive and industrial, and military and aerospace markets. LeCroy's 40-year heritage of technical innovation is the foundation for its recognized leadership in "WaveShape Analysis"—capturing, viewing, and measuring the high-speed signals that drive today's information and communications technologies. LeCroy is headquartered in Chestnut Ridge, New York. Company information is available at <http://www.lecroy.com>.
