Catalyst Conquest™ Series Analyzer for USB Now Available with Exerciser Option

USB 2.0 host emulation mode allows developers to systematically test enumeration and device configuration sequence

Santa Clara, CA, February 18th, 2008 — Catalyst Enterprises, Inc., a leading manufacturer of advanced design verification and test tools for Serial Attached SCSI (SAS), Advanced Serial ATA (SATA), PCI Express™, USB 2.0, Wireless USB, and other high performance I/O technologies, today announced availability of a USB exerciser option for the top selling Conquest™ Series analyzer.

“The Conquest exerciser can emulate USB 2.0 host controller traffic including the full device enumeration sequence.” said Mike Micheletti, Product Manager at Catalyst Enterprises. “This allows developers to systematically step through device configuration while capturing the actual responses from the USB device under test.”

The Conquest exerciser provides a graphical user interface and drop-down menus for customizing USB host traffic and timing. Test sequences can also be created by replaying packets captured with the analyzer. Fully-integrated with the Conquest Advanced analyzer platform, the exerciser option provides sophisticated test capabilities for device developers with limited budgets.

Availability

The Catalyst Conquest Exerciser option is available immediately. The exerciser option can be purchased together with the analyzer or added to an existing Conquest system through a software upgrade. For more information, see the Catalyst website at www.getcatalyst.com and click on USB>Conquest.

About Catalyst Enterprises, Inc.

Founded in 1992 in San Jose, CA, Catalyst manufactures data bus analysis and emulation tools for Serial Attached SCSI (SAS), Serial ATA (SATA), PCI Express, USB 2.0, Wireless USB, and Fibre Channel. Catalyst’s development tools incorporate a reconfigurable hardware core architecture, which can be updated in the field, keeping the tool current with the latest standards and updated feature sets. Catalyst products are used by companies in the telecommunications, semiconductor, software, consumer electronics, defense, and other industries. Catalyst is a wholly-owned subsidiary of LeCroy Corporation (LCRY). Catalyst can be found on the web at www.getcatalyst.com.
